DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 43 and 44, drawn to a connector housing, classified in class 439, subclass 625.
- II. Claims 22-42, drawn to a female terminal, classified in class 439, subclass 843.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because leading edge above the first tube, single sheet, the effective outer diameter that is smaller than an effective inner diameter of the first end, and the connection section limitations are not required in the combination. The subcombination has separate utility such as a terminal incased in a sealed and over-molded housing without passageways.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2833

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
